56 LIST OF 160+ BIND 4.0 STARTUPS (2017 - 2022)

Fostering Innovation Throughout

6 Successful Editions 2017-2022

With 6 editions of proven success, BIND 4.0 helps implement mutually beneficial Startup-Corporate collaborations. The renowned Open Innovation Platform has two startup programs devoted to enhancing the digital transformation of established corporate companies and SMEs, in addition to increasing the growth of technology startups through real projects and reference customers. The BIND 4.0 Open Innovation & Acceleration Program has developed more than 240 Industry 4.0 projects and accelerated over 160 Tech Startups, so far.

The public's interest in BIND 4.0 keeps increasing as shown by the 6th edition's data, with over 770 applications, the highest number to date. What's more, the program has attracted talent from around the globe, having received applications from 6 continents and more than 80 countries. With its reputation for supporting and improving the business ecosystem, BIND 4.0 has undeniably established itself at an international level, as a benchmark accelerator for advanced industrial projects.

The symbiosis of open innovation is undeniable, corporate resources, processes and means combined with startup agility, focus and speed. The successes achieved by the BIND 4.0 Open Innovation Platform have consistently attracted the attention of companies of all sizes, based in the Basque Country. In fact, along with the

growing number of startup applicants, each year the total number of corporate clients increases.

In this 6th edition, more than 65 innovative corporations have chosen BIND 4.0 to identify and deliver groundbreaking startup solutions. Year after year, our corporate clients show their unrelenting commitment to innovation by believing in BIND 4.0 and our mission to enrich the Basque Advanced Industrial ecosystem. Open Innovation through collaboration with startups remains a priority for the BIND 4.0 Corporate Venture Clients.

As we expand to meet the needs of the marketplace, BIND 4.0 continues to grow & evolve. In the 6th edition, we noticed that trends were changing and new technologies were emerging that we needed to incorporate into our roster. 40% of registered projects were committed to technologies such as the Internet of Things, Artificial Intelligence and Big Data to develop their solutions. More specifically, in the 6th edition, startups have developed vision-based intelligent automation, nanotechnology to reduce energy consumption, industrial use drones, recovery of waste as a raw material, image-based smart meter reading, a telerehabilitation platform, cold chain traceability, personal data anonymization SaaS, and machine vision for quality control, among others. The technologies we incorporate help us move towards a more intelligent, efficient and sustainable industry in the future.

BIND 4.0 Key Performance Indicators

The Open Innovation and Acceleration Program lasts 24-weeks and startups keep reaping the benefits of their work long after. Our executive education and training sessions help Founders establish strategies and procedures, providing transferable skills for their next B2B relationships. Since the BIND 4.0 program is intended to make deep rooted business connections, 60% of the participating startups continue to work with the Corporate Client companies after the program ends.

Overall, startups double their income one year after their graduation on account of the business connections made through BIND 4.0, and the program has generated over 7M€ in turnover for startups.

These impact figures are due to not only the market-validation with a big name reference client, but thanks to

the immersive events scheduled. BIND 4.0 startups regularly network with main players in the Basque ecosystem, participate in key industry events, meet Venture Club Investors and get in-depth training and mentorship.

Since 2017, BIND 4.0 has been supporting young companies with their journey into the Basque Industrial and Entrepreneurial Ecosystem and has been internationally recognized for its efforts. One of the successful stories of the BIND 4.0 program, has been the European Commission Award received for Improving the Business Environment. By supporting businesses and boosting the local ecosystem through collaborative digital transformation projects, together, we're pushing innovation forward.

PROJECT WITH CORPORATE PARTNER

INVESTMENT STAGE

Seed - VC/Angel

FOUNDERS

David Ciudad, Colin Burnham, José Gabriel Macía, Mokhtar Chmeissani

HEADQUARTERS

Barcelona, Spain

FOUNDED

2020

NO. OF EMPLOYEES

7

DESCRIPTION

PhotonAi is a photon counting, multi-energy x-ray camera designed to step-change industrial inspection capabilities for quality and safety. The PhotonAi camera detects low-density foreign bodies for food inspection at production speeds. Deep Detection technology can detect plastics, bones, debris and organic elements in food. Patent granted in the USA, Europe, Japan and China.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Deep Detection focuses on the Food and Beverage market, with clear problems that they can solve. Their business model is very clear, they sell cameras and hardware to companies that manufacture X-ray machines for F&B producers. They have verified the business opportunity and have 21 worldwide companies in their sales pipeline for this 2022.

2

DESCRIPTION

MerasyS' main service is intelligent inspection based on three technologies: Real-Time Remote Monitoring (RTRM), Computer Vision (CV) and Convolutional Neural Networks (CNNs). They offer ad-hoc artificial intelligence solutions, including the development of hardware prototypes prepared for any physical environment and programmed with Open Source software.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Their potential clients could be companies from the private or public sector, especially in the industrial sector with technological needs related to Artificial Intelligence and Real-Time Remote Monitoring. Their main clients by sector are: Automotive (Stellantis, Renault), Energy (REPSOL, IBERDROLA), Renewables (GRI Towers) and Railway (ADIF, ACS).

jordi@nablvision.com

DESCRIPTION

Nabla Vision offers bespoke 3D Real-time Perception solutions that enhance current teleoperation and AI vision performance integrating purpose-built vision sensor units based upon cost-efficient LiDAR & camera devices fusion. Nabla Vision technology focus on enabling efficient and secure/safe operations for real-time robotics, tele-operation, security and environment monitoring. By fusing high-density 3D information with vision data; localization, mapping, long-range object detection, identification and tracking become much simpler in dynamic and complex open-air scenarios, facilitating the task of computer vision AI algorithms or human teleoperators.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Nabla Vision products and solutions address the challenges of real-time 3D sensing at the edge while remaining cost-effective. The targeted markets are I4.0 and logistics-mobility operators with relevant safety and efficiency needs in their operations and logistics, or defense-security players demanding detection, tracking and navigation in dynamic and complex open-air scenarios.

ANCORA

Ancora

Voice-enabled shop floor software made for PEOPLE

DESCRIPTION

Ancora is a spin-off from the University of Vigo, which develops and markets digital tools for manufacturing line workers designed to be used by people. Even simple tasks become complex on the shop floor with poorly designed interfaces. With Ancora working on the shop floor is easier and faster and anyone can do it.

Ancora Worker Connect is the voice-enabled software that powers shop floor workers. It enables lightweight worker digitalization that raises productivity and that anyone can use.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Manufacturing companies willing to simplify and improve the use of digital tools on the shop floor. Ancora will complement the existing MOM software managing the production processes, helping line workers to deliver better results and information. Ancora Worker Connect suites different manufacturing processes, but always focused on processes where human contribution is relevant for our customer. Our customers belong to different sectors, like automotive, aerospace, construction materials and machinery OEMs.

NO. OF EMPLOYEES

3

DESCRIPTION

BeChained has developed a smart-energy platform for sustainable purpose businesses: it manages flexible distributed resources (like energy consumption or self-production) for energy intensive consumers.

With A.I, we build the digital twin and the smart-governance that instructs the production programming to help clients cut recurrent inefficiency in production processes, so energy costs and CO2 emissions, without disrupting the production outcome and business-as-usual continuity. This generates new revenue streams for bottom lines when compensating the electric grid unexpected peak moments from demand flexibility, so that grid operators don't depend only on extra production from fossil fuel power plant to fix them.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Business electricity consumers, like manufacturers, commercial buildings, logistic hubs and E.V. charging stations with a minimum 2GWh/year consumption. Aggregators willing to participate in the energy balance service markets with demand flexibility.

Digitizing the most Distributed Infrastructure on Earth, the Power Lines

TECHNOLOGY

Artificial Intelligence, Internet of Things, Big Data

BUSINESS FOCUS

Intelligent Industry, Clean Energy & Sustainability

PROJECT WITH CORPORATE PARTNER

INVESTMENT STAGE

Seed

FOUNDERS

Sebastian Cerone, Sebastian Garcia Marra, and Lucas Chiesa

HEADQUARTERS

Gdansk, Poland

FOUNDED

2019

NO. OF EMPLOYEES

9

DESCRIPTION

Sentrisense is digitizing the most geographically distributed human infrastructure on earth, the power lines. They help detect problems in the power lines even before these problems happen, such as fallen trees, ice, corrosion, fallen power lines and towers. They do it by measuring the mechanical movement of the lines.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

Sentrisense provides a suite of connected solutions for helping power transmission (TSO) and distribution (DSO) companies in three different dimensions:

- Helping asset managers to perform replacement of damaged and worn out power lines based on objectively measured conditions.
- Helping power lines maintenance teams to improve their Early fault detection (EFD) capabilities.
- Helping power lines operators to drive more energy through the grid with the same infrastructure.

Among their customers, there are companies such as the largest power transmission company in Chile, Transelec.

Juliana Jaramillo, Antonio Cuenca, Javier Achiaga

HEADQUARTERS

Barcelona, Spain

FOUNDED

2020

NO. OF EMPLOYEES

4

CONTACT DETAILS

Javier Achiaga

javier@coolingphotonics.com

DESCRIPTION

Cooling Photonics provides passive cooling solutions that reduce energy consumption, with zero carbon emissions, increasing systems performance whilst decreasing operating costs. Their product, applied on any surface hotter than the ambient, dissipates heat in the form of infrared radiation, reducing its temperature, even under direct sunlight.

Photovoltaic panels reduce their efficiency by 0.4-0.5% for each degree above 25°C. Cooling Photonics' technology allows photovoltaic asset managers and O&M to recover part of these efficiency losses and produce more electricity, extending the useful life of the panels and reducing their decay.

TARGET AUDIENCE AND MOST RELEVANT CLIENTS

B2B2C business model. Early adopters Commercial & Industrial and Utility-Scale plant owners and O&M providers.

About BIND 4.0

BIND 4.0 is a public-private initiative that promotes the development of transformative Industry 4.0 projects by connecting groundbreaking Startups worldwide with well-established companies based in the Basque Country.

The BIND 4.0 Basque Open Innovation Platform attracts innovative startups with solutions applicable to the Intelligent Industry, Clean Energy & Sustainability, Health Tech and Food Tech sectors. Helping boost the growth of tech startups through real projects with reference customers, our win-win programs benefit startups and the corporate clients. Established corporate companies discover new technologies and quickly test and develop groundbreaking solutions to enhance their digital transformation journey. BIND 4.0 has made a positive impact on the local business environment for our unmatched startup acceleration support, training and immersion in industry activities, in addition to facilitating collaborative projects with a Corporate Venture Client.

The Corporate Venture Client approach means that participating startups will have at least one paid Industry 4.0 pilot project with a well-respected company, in addition to award-winning acceleration and support services. These are some key benefits for startups participating in BIND 4.0:

POC, Market Validation with Reference Clients 45K€ Average Contract Retain Ownership, No Equity Taken High Impact Mentoring & Training Immersion into Innovative Industrial Ecosystem Access to Public and Private Funding

GOALS

BIND 4.0 aims to boost the digital transformation of the industry, drawing in startups with the most innovative technologies that will boost innovation in the automotive, energy, telecom, machine-tool, aeronautics, health, food & beverage, distribution and logistics, and railway sectors, which drive the Basque economy. The BIND 4.0 Open Innovation Program offers a mutually beneficial collaboration: an opportunity to promote the digital transformation of the established companies, and in turn, increase the growth of technology startups through real projects with reference customers.

MAIN OBJECTIVES:

- Attract new emerging Industrial activity
- Offer support and routes to market for technology startups
- Strengthen the local entrepreneurial ecosystem by attracting & retaining talent in the region
- Position the Basque Country as an Industry 4.0 Leader
- Facilitate the development of innovative solutions in the Industrial sector
- Accelerate the digital transformation and innovation of Basque Companies

DEVELOPMENT AREAS: TECH & SOLUTIONS

These are the main technologies the program is currently focused upon developing: collaborative robotics, artificial intelligence, indoor positioning, big data analytics, blockchain, IoT / IIoT, machine learning, wearables, drones, medical devices, cybersecurity, bio-based solutions, cleantech, augmented or virtual reality, additive manufacturing, digital twin, smart energy, new materials, nanotechnology, and artificial or computer vision.

BIND 4.0 is seeking technology startups with products or solutions with potential application in these four sectors: Intelligent Industry, Clean Energy & Sustainability, Health, and Food. Startups worldwide, completing the configuration of their solutions or those already in the market are welcome.

BENEFITS

There are so many reasons to accelerate your company with the BIND 4.0 Platform, part of a larger public initiative promoting, attracting and investing in innovation and emerging technologies. With over a century of Industrial activity and pioneering technology, the Basque Country is home to some of the world's most influential manufacturing companies. Due to the public-private nature of this initiative, BIND 4.0 offers strong assurance in completing the goals set, by bringing together corporate companies and local government agencies, all part of an ecosystem committed to R&D & Innovation.

Startup Benefits

Thanks to the unique Venture-Client approach, selected startups will have at least one paid Industry 4.0 project with well-respected companies, in addition to unmatched acceleration and support services. Because we know the needs of over 65 Corporate Clients, our Global Startup Network has the opportunity to solve real industry challenges. Thus, BIND 4.0 is a catalyst for open innovation and mutually beneficial business opportunities.

With an average amount of €45,000, the Industry 4.0 pilot project is a paid contract with one or more industry leading companies and contracts have been as high as €150,000. The venture-client invests in the startup by buying the product or solution for a strategic

benefit and in-turn acts as a reference client and in some cases providing proof of concept.

In addition to the paid contracts to test, fine tune and implement their solutions, there are excellent support services offered by the accelerator, including access to financial support and investors in the BIND 4.0 Venture Club. The executive education and expert mentoring provided helps Founders establish strategies for success. Not to mention the numerous networking activities that are carried out with the participating companies, startups and the public to facilitate the immersion of disruptive startups in the Basque industrial ecosystem, one of the most vibrant and growing networks in Europe.

Corporate Clients Benefits

Collaborating Corporate Clients participating in BIND 4.0 have access to an agile Open Innovation Platform where they discover, meet, and contract the best startups under the Venture Client approach. Often large companies are aware of the digitization challenges they face but not necessarily the solutions. BIND 4.0 introduces them to new technologies and innovation to test and see what works for them. Our platform allows corporations to be early adopters of the most innovative technologies developed by startups and to quickly incorporate competitive, state-of-the-art solutions into their processes.

The startup scouting and targeted training performed to meet specific goals and address any challenges in their digital transformation and path to innovation, are some of the biggest benefits of BIND 4.0. The Open Innovation Platform provides an identification and analysis of the latest technologies and business solutions in the areas of most interest to our Corporate Clients. Corporate

companies can seek individual innovation projects or identify group challenges, whose solutions would positively impact the industry as a whole. What's more, BIND 4.0 offers training and workshops to help bridge the gap between startups and corporations by helping to establish a collaborative framework for successful collaborations.

The platform acts as a forum for Open Innovation & Corporate Venturing, by enabling learning from innovative leaders within the local Industrial ecosystem. By connecting experts, through networking, executive education and industry events, corporate clients are able to share their venture client experiences and gather ideas, referrals and inspiration for their own innovation strategies. In short, the program is identifying and attracting talent from around the world and empowering established companies to innovate through collaboration with startups to improve the competitiveness of companies based in the Basque Country.

SERVICES

With our Acceleration Program we incorporate expert mentoring with the aim to generate successful Startup-Corporate collaborations. We catalyze new business through industry events, introductions to Industry Investors, and regular access to the main companies investing in innovation. Our Open Innovation Platform connects Startups with a real use project and an opportunity for market validation, product development or internationalization, thanks to our expanding Basque Industry 4.0 Innovation Ecosystem.

Access to Clients

BIND 4.0 is a high impact accelerator, turning leading Industry 4.0 companies into venture clients, with paying contracts for the disruptive young startups participating. We know the needs of 65 key players in the Basque Industry, our corporate venture clients, who identify digital transformation challenges or group challenges that

affect the sector. Our Corporate Clients rely on us to find groundbreaking and competitive startup solutions, to test and fine-tune innovative technologies. The Corporate Clients serve as a reference customer for the startups, allowing them to work in a real environment as they develop their projects and grow their business with a paying customer.

Access to Financial Aid & Investment

BIND 4.0 is a 'zero equity' program, it does not require startups to allocate part of their business to participate. What's more, the startups have access to economic aid for entrepreneurship, technology and business development offered by the Basque Government,

SPRI and the three Basque Provincial Councils. The variable funding is offered in the form of grants and subsidies. Additionally, through the BIND 4.0 Venture Club we provide access to specialized financing and industry investors as desired.

Mentoring

Ensuring success through excellent resources, the selected startups receive specialized support provided by mentors, entrepreneurs and professionals of global relevance. BIND 4.0 Mentors are experts in the areas of business development, technology, business modeling and

scale-up, investor relations, access to finance, commercial skills, go-to-market strategy, and internationalization. Startups are assigned a 1:1 Mentor to advise them, if desired, and to guide startups as they navigate, collaborate and communicate in corporate environments.

Networking

One of the most effective tools for emerging companies is networking and attending sessions that allow one to build relationships with other professionals and seek new business opportunities. BIND 4.0 provides access and direct contact with the entire Basque

industrial, scientific and technological ecosystem, composed of small, medium and large companies. Startups have the opportunity to meet with the business, cluster management organizations, hubs and technological representatives that are most interesting to them.

Training

To help accelerate startups, participants attend high-impact workshops designed to develop key abilities, taught by world-class professionals. Offering expert quality training for technical skills, go-to-market strategy, market positioning,

business development and aspects related to project financing and funding. Executive education is also extended to our corporate partners to offer support in carrying out successful Corporate-Startup collaborations.

Workspaces

Startups have different spaces available to develop their projects in the ecosystem of BIC Araba, BIC Bizkaia, BIC Bizkaia Ezkerraldea and BIC Gipuzkoa, the local public Business

Innovation Centers. The workspaces are provided without charge and locations are determined based on the needs or preferences of each startup and collaborating company.

International Projection & Visibility

Our platform offers emerging companies the greatest possible visibility and credibility acting as a launchpad for these companies. The BIND 4.0 Demo Day event provides the opportunity for all participants to share their collaborative projects and solutions alongside the

Corporate Clients they worked with. Because the Demo Day event is attended by the 65 Corporate Clients and our 20-member Venture Club in addition to local businesses and entrepreneurs, it is effective in attracting additional clients and the attention of investors.

Internationally Acclaimed Platform

In 2020, BIND 4.0 was acknowledged by the European Commission with an EEPA award for Improving the Business Environment. Additionally, the International consulting firm Gartner declared BIND 4.0 is one of the best

platforms driving innovation in industrial ecosystems. BIND 4.0 is a benchmark platform for open innovation, realizing disruptive Industry 4.0 projects, and growing the entrepreneurial ecosystem.

Technological Partners

We are proud of our Technological Partners Microsoft, Siemens and Amazon Web Services, providing participating startups with technology solutions valued at €20,000. In addition

to their technological support, these partners have provided professional mentoring and industry visibility to the projects developed within the BIND 4.0 framework.

Venture Club

Thanks to our more than 20-member Venture Club, BIND 4.0 startups have the opportunity to continue accelerating the development of their companies even after the program. The Venture Club is

made up of Europe's leading venture capital firms that invest in early growth stage and B2B startups and specialize in Intelligent Industry, Energy, Health Tech and Food Technologies.

Who's Behind BIND 4.0?

BIND 4.0 is a public-private program, designed to attract and promote innovation with support from the local government and large, industry-leading companies with operations in the Basque Country.

In its effort to boost digital transformation and position the region as number one on the international level for industrial activity, the program is free to participate and there is no equity taken from participating startups. One of our

greatest advantages is attracting global startups with the support of over 65 well respected companies that act as corporate venture clients, in addition to a supporting cast of business mentors, investors and industry experts.

Basque Government and the SPRI Group

BIND 4.0 is a platform funded by the Basque Government and the SPRI Group, a business development agency where local companies find the tools with which to finance, launch, internationalize, locate industrial land and apply new technologies. In addition,

the SPRI agency is commissioned by the Basque Government to attract and facilitate foreign investments from its “Invest in the Basque Country” initiative, helping to magnify the region as an industrial and entrepreneurial hub.

Corporate Venture Clients

BIND 4.0 has 65 Corporate Clients, made up of some of the world’s top companies leading the Industry 4.0 transformation, working in the fields of Intelligent Industry, Clean Energy & Sustainability, Health Tech and Food Tech. Participating startups develop a project for one or more of these

leading companies while getting the unique opportunity to collaborate and grow alongside them. The corporate clients function as a customer, as well as a resource for new technologies and networks, which the startup can use to develop and strengthen its business tools.

Mentors

Startups are matched with a professional coach who guides and advises them throughout each stage of their acceleration. BIND 4.0 Mentors are highly experienced professionals and entrepreneurs of global relevance

which cover a wide variety of specialties including: business development, technology, access to financing and investors, sales and pitching skills, go-to-market strategy and internationalization.

Technological Partners

We are grateful for our Technological Partners Microsoft, Siemens and Amazon Web Services, providing participating startups with technology solutions valued at €20,000. In addition

to their technological support, these partners have provided professional mentoring and industry visibility to the projects developed within the BIND 4.0 framework.

Venture Club

Thanks to our more than 20-member Venture Club, BIND 4.0 startups have the opportunity to continue accelerating the development of their companies even after the program. The Venture Club is

made up of Europe's leading venture capital firms that invest in early growth stage and B2B startups and specialize in the areas of Intelligent Industry, Energy, Health Tech and Food Technologies.

160+ BIND 4.0 Startup Alumni

These are the 163 emerging companies from all six editions that have been contracted by and have collaborated with leading industrial companies, executing more than 240 Startup-Corporate Industry 4.0 projects so far.
